

Step 4: Problem – Solution Fit

BookNest — Online Bookstore Management Platform

1.Customer Segment CS Who is your customer? Three segments: Customers (book buyers), Sellers and Administrators (platform managers) who each use BookNest for a different purpose.	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limiting their choice of solutions? Limited time to manage stock/orders manually, limited technical skill to run separate tools, and no single login or dashboard connecting book, order, and user data.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem, or what have they tried in the past? Generic online marketplaces, local bookstore visits, spreadsheets for stock, and manual email/phone coordination between sellers and buyers.
2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? Customers need to find and buy books reliably. Sellers need to list and manage books and orders. Administrators need to oversee users,sellers, and inventory securely.	9. PROBLEM ROOT CAUSE RC What is the real reason this problem exists? There is no single centralized system connecting customer, seller, and admin workflows for books — each operates through separate, manual,disconnected processes.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? Customers compare listings across sites manually. Sellers track stock in spreadsheets and check multiple channels for orders. Admins cross-check records by hand.
3. TRIGGERS TR What triggers customers to act? Needing a specific book quickly, wanting to sell books without manual overhead, or needing tighter control as the platform grows.	10. YOUR SOLUTION SL Write down your current solution, fill in the canvas, and check how it matches customer behaviour. BookNest: a centralized online bookstore platform with role-based dashboards — customers browse and purchase books, sellers manage listings and orders, and administrators securely oversee users, sellers, books, and platform activity, all in one system.	8.1 ONLINE CH What kind of actions do customers take online? Browsing the BookNest platform, placing orders, managing listings, and using the admin dashboard to oversee activity.
4. EMOTIONS: BEFORE / AFTER EM How do customers feel before and after facing the problem? Before: frustrated by scattered, manual, error-prone processes. After: confident, in control, and trusting that the platform is accurate and secure.		8.2 OFFLINE CH What kind of actions do customers take offline? Physical bookstore visits, phone/email order coordination, and manual paperwork that BookNest is designed to replace.
